

censhare Monitor

For censhare **Administrators**

An embedded real-time users and system monitoring, inside your censhare platform. With censhare Monitor, no more black-box, get straight facts and datas on Renderer / Service clients status and users activities. The most accurate check to Adobe InDesign® servers (Renderer clients) and Image service status (Service clients) for each censhare server.

IT Monitor

Helps censhare Administrators to check performance, identify potential issue and reduce investigation time around Renderer clients and Service clients.

Active / Passive Users Monitor

Active Users Monitor provides analytics on logged-in users for the current day, week and month then contact them from a one-click button in case of issue or just to send internal communication.

Passive Users Monitor displays passive users account (not logged-in) since 3, 6 or 12 months. It will give your the opportunity to cleanup and remove unuseful censhare accounts without impact.

Users Monitor

Offers a unique way to have a global vision of censhare users. A collection of widgets will provide you all the answers you never had before. In real time, you are able to know how many users are logged-in for all or a specific censhare server. You are now able to monitor the maximum of concurrent users with Top day feature but also keep an eye on users habits with all charts provided. Track all censhare client types and releases used for the fastest way to validate your internal upgrade process.

Advantages

-  Reduce efforts and time during Renderer and Service clients issue
-  Keep control on censhare licenses cost
-  Manage and keep contact with users in real time
