CLOUD

Cloud Upgrade Package

The Cloud Upgrade Package helps you migrate to Censhare Cloud while keeping all your investments made in Censhare Classic. We have created fixed upgrade paths to provide a transparent, predictable, and effortless transition.

The 3 Steps to Censhare Cloud

Migration feasibility check

After we receive access to your system, we start with a general feasibility check to determine whether your environment meets the basic requirements for the migration.

Complexity check and offer

We analyze your server and customizations to determine which migration package best suits your needs. The complexity depends on your interfaces, automation, frontend components, and Censhare version. You'll receive a result document with detailed conclusions of the first two steps.
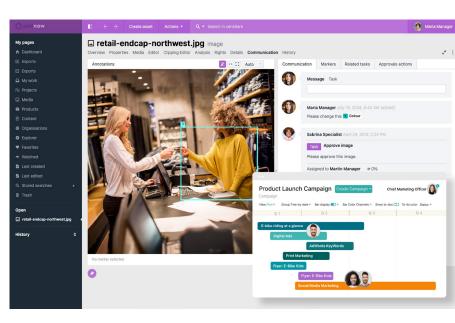

Migration

We provide an offer with a timeline based on your Censhare version, operations, and system complexity so you know exactly what to expect during the migration.

Pricing

The price of the Cloud Upgrade Package is calculated individually for each customer and depends on the complexity of the existing environment. The final offer is given after the first two paid steps (Migration feasibility check and Complexity check) are completed.

Getting started

Contact your contact person at Censhare or your implementation partner to get started.
